BRADEN FILTRATION

SPEC SHEET · MANUFACTURED IN CLAREMORE, OKLAHOMA

Pre Filters

The first stage. They capture larger particles so the filters behind them last longer.

Overview

A pre filter is the first stage in a filter bank. It captures larger particles before they reach the more expensive high-efficiency filters downstream, which extends the life of those final filters and lowers the cost of running the system.

Braden manufactures pre filters for data center, HVAC, and industrial systems. Call or email for the full line card and specifications.
